Pharmacol. 46:88-96 (1994).

CATALYTIC ACTIVITY: An aldebyde + ND(+) + H(2)O an acid + NDH.

PATHWAY: Ethanol utilization; sereoud step.

SUBUNIT: HOMOTETRAMER (BY SIMILARITY).

SUBUNIT: HOMOTETRAMER (BY SIMILARITY).

INDUCTION. By retinoic acid; 4°5 fold increase.

SIMILARITY: HELONGS TO THE ALDEHYDE DEHYDEWERNASES FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0; Gaps

FUNCTION: RECOGNIZES AS SUBSTRATES FREE RETINAL AND CELLULAR RETINOL-BINDING PROTEIN-ROUND RETINAL. DOES METAROLIZE OCTANAL AND DECANAL BUT DOES NOT METABOLIZE CITRAL, HENZALDEHYDE, ACETALDEHYDE
                                                          AND PROPANAL EFFICIENTLY (BY SIMILARITY).

AND CATALYTIC ACTIVITY: An aldebyde + NAD(+) + H(2)0 = an acid + NADH.

PATHWAY: PFFINALY ACID BLOGENESIS.

SUBUNIT: HOMOTETRAMER (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     62 VRAARLAFSLGSVWRRMDASBRQQLIDKTADI.VEPDPAVLATMESLNSGKPFLGAFYVDI.
